

1. Create “Increment” button to increase the value of the counter and “Decrement” button to decrease the value of the counter. The “Increase” button should invoke multiple methods.
 - a. To increment the value
 - b. Say Hello followed by a static message.

2. Create a button “Say Welcome” which invokes the function which takes “welcome” as an argument.

3. Create a button which invokes synthetic event “OnPress” which display “I was clicked”

7

Increment

Decrement

Say welcome

Click on me

localhost:3001 says
I was clicked.

OK

Currency Converter!!!

Amount:

Currency:

Submit

4. Create a “CurrencyConvertor” component which will convert the Indian Rupees to Euro when the Convert button is clicked.

Handle the Click event of the button to invoke the handleSubmit event and handle the conversion of the euro to rupees.

7

Increment

Decrement

Say welcome

Click on me

localhost:3001 says
Converting to Euro Amount is 6430

OK

Currency Converter!!!

Amount: 80

Currency: Euro
